Senior Software Engineer

Senior iOS engineer with 7+ years shipping apps to the App Store. Deep experience in hybrid mobile architectures (React Native, Flutter) and platform-level infrastructure. Currently, the sole technical owner of Twitch's Branch SDK integration, solving platform problems end-to-end from prototyping to stakeholder alignment using AI-assisted development tools.

WORK EXPERIENCE

Twitch (via TEKsystems) • 02/2026 – Present

Lead Mobile Engineer, Marketing Tech • Contractor

Owned Branch SDK integration on iOS and Android, leveraging agentic coding for end-to-end delivery

- Modernized to the latest SDK versions, eliminated technical debt, added new features, rebuilt the data pipeline, and instrumented new event tracking
- Prototyped an App Clip solution in SwiftUI to restore deferred deep linking for iCloud+ users and drove stakeholder alignment via working demos
- Instrumented telemetry and monitoring for SDK integration on iOS and Android, closing a long-standing observability gap and enabling a live health dashboard
- Led attribution event data-quality remediation with Data Science, added unique identifiers for reliable joins, and restored integrity for performance marketing reports

Independent • Seattle • 02/2025 – 01/2026

Senior Software Engineer

Portfolio → timmytimmytimmytime.github.io

- Designed Flutter app with adaptive theming and responsive layout, using agentic coding
- Developed spatial prototypes using OpenCV and OpenXR, published working demos on GitHub

Getty Images – Mobile • Seattle • 01/2018 – 01/2025

Senior Software Engineer

Developed 9 mobile apps, REST APIs, backend, and internal systems

- Architected major Contributor app feature areas (enrollment, stats, releases), delivering cross-platform (iOS/Android) functionality using **React Native**, integrating REST APIs, and achieving 1M+ downloads with 4.7+ rating
- Integrated AI-powered content-moderation pipeline that quarantined unsafe imagery before human exposure, providing accuracy and cost analytics to help stakeholders assess viability

PATENTS

US8619036B2 – Virtual keyboard based activation and dismissal (2013)

Virtual keyboard that adapts to natural hand placement

- **146+ Citations**
- Cited by Apple, Amazon, Google, Samsung

SKILLS

Languages

- Swift
- Kotlin
- JavaScript
- C++
- C#

Mobile

- SwiftUI
- Jetpack Compose
- iOS development
- Android development
- React Native

Technologies

- REST APIs
- Agentic Coding
- Xcode
- Android Studio
- Firebase

- Rewrote Getty Images and iStock **Android** apps in **Kotlin** and **Jetpack Compose** using MVVM pattern, addressing long-term performance, stability and maintainability concerns
- Built Digital Model Releases app, handling iOS development with Swift/SwiftUI, delivered a usability-test-ready app in less than one month that replaced paper workflows
- Drove photo submissions growth by over 200% through mobile analytics and data-driven optimizations

Getty Images – Frontend Web • Seattle • 05/2013 – 12/2017

Senior Software Engineer

Modernized e-commerce sites and CI/CD pipeline, drove mobile-first design

- Delivered a multi-year migration of GettyImages.com from .NET to **JavaScript**, performing code refactoring of major pages with zero critical incidents and 100% uptime
- Optimized Continuous Deployment for GettyImages.com, scaling release frequency by 300%
- Re-architected server-side routing to eliminate injection vulnerabilities and harden security
- Modernized high-traffic pages (Account, Purchase) using **JavaScript**, improving user experience and long-term maintainability
- Championed mobile-first web design, and delivered across all GettyImages.com pages

T-Mobile • Bellevue • 10/2012 – 05/2013

Software Developer

- Migrated financial data processing jobs to improve reliability and eliminate security vulnerabilities

LG Consulting • Redmond • 11/2011 – 05/2012

Software Developer

- Developed datacenter monitoring dashboard, displaying uptime, performance, and incident KPIs

Microsoft – Surface (PixelSense) • Redmond • 10/2005 – 08/2010

Software Development Engineer in Test

Led beta program, automated platform tests, created gesture patent

- Invented gesture-input patent “Virtual keyboard based activation and dismissal”, a widely cited innovation in touch interfaces
- Created automated multi-touch testing framework evolving from IR playback to procedural gesture generation with precise finger positioning/orientation, enabling continuous stress testing and shared test tools across the team
- Served as Quality Lead for the touch-input stack and UI navigation layer, performing deep debugging in customer environments and driving functional, performance, and security testing
- Led the Hardware Beta program, including remote monitoring, coordinating deployments, managing vendor team, and gathering customer feedback.

- CI/CD

AR/VR

- ARKit
- ARCore
- OpenXR
- XR Hands
- OpenCV

AWARDS

Getty Images Hackathon 1st Place • 2017

Photos.com Augmented Reality Experience

Developed wall art application using ArgonJS months before ARKit and ARCore launched

EDUCATION

Certificate: Advanced C++ Programming

University of Washington
06/2007

Year-long program covering data structures, algorithms, and memory management including early RAIL patterns

Certificate: Advanced Development ANSI C

University of Washington
06/2005

Comprehensive program covering programming fundamentals, coding practices, and development principles
